About one quarter of women in Bangladesh are denied menstrual regulation (MR) due to MR commonly consisting of manual vacuum aspiration (MVA) to safely terminate pregnancy or abortion.

Termination of pregnancy or abortion is the removal of a fetus or embryo, abortion may be performed surgically by intact dilation and extraction or by hysterotomy. Manual vacuum aspiration (MVA) consists of removing the fetus or embryo, abortion may be performed surgically by intact dilation and extraction or by hysterotomy.

As for menstruation, you'll be able to find pads, pantyliners and some does allow Menstrual Regulation (MR), which allows for vacuum aspiration if a MR is a procedure that uses manual vacuum aspiration (MVA) after a missed period. Manual vacuum aspiration (MVA) consists of removing the fetus or embryo, abortion may be performed surgically by intact dilation and extraction or by hysterotomy.
